

Maxguard® H-750 is a two component, spray applied, 100% solid polyurethane/polyurea hybrid elastomer system. Maxguard H-750 has good chemical resistance, excellent toughness and abrasion resistance. However, this elastomer is not stable under the effect of UV light. A color stabilizing additive is available upon request. Various colorants are available for the end users to blend with the B-side (polyol component).

Common Uses: Truck bed liners, metal and plastic after-market automotive parts.

General Requirements: Equipment must be capable of delivering the proper ratio (1:1 by volume) of isocyanate and resin at adequate temperatures and spray pressures. Substrate must be at least 5°F above dew point, with a maximum relative humidity of 80%. Substrate must also be free of moisture (dew or frost), grease, oil, solvents and other materials that would adversely affect adhesion of the product. This product must not be used when the continuous service temperature of the substrate or product is below -10°F (-23°C) or above 140°F (60°C).
