## ICMENE/55

Huntsman Building Solutions Icynene Xpress 55 is a two component, open cell, spray-applied semi-rigid polyurethane foam system. This low-density system offers excellent adhesion to various substrate and also excellent cohesion between layers. HBS Icynene Xpress 55 complies with the intent of the International Code Council's residential and commercial building codes for spray polyurethane foam plastic insulation. It also complies with the AC-377 Appendix X and can be installed in attics and crawl spaces without an ignition barrier.

| Drum Temperature During Processing | $90^{\circ}-100^{\circ} \mathrm{F}$ |
| Drum Temperature During Storage | $50^{\circ}-77^{\circ} \mathrm{F}$ |
| Substrate \& Ambient Temperature | $23^{\circ}-120^{\circ} \mathrm{F}$ |
| Moisture Content of Substrate | $\leq 19 \%$ |
| Moisture Content of Concrete | Concrete must be cured, dry and free of dust and form release agents |

*Foam application temperatures and pressures can vary widely depending on temperature, humidity, elevation, substrate, equipment and other factors. While processing, he applicator must continuously observe the characteristics of the sprayed foam and adjust processing temperatures and pressures to maintain proper cell structure, adhesion, cohesion and general foam quality. It is the sole responsibility of the applicator to process and apply Icynene Xpress 55 within specification. **It may be necessary to go outside of the recommended processing parameters or split temps due to ambient temps and material viscosity.

## RECOMMENDED MAXIMUM PASS

4" maximum lifts.*
*For optimal results, apply this product in 4" passes. Allow each pass to complete the end of rise before applying additional passes.

General Requirements: Equipment must be capable of delivering the proper ratio (1:1 by volume) of polymeric isocyanate (PMDI) and polyol blend at adequate temperatures and spray pressures. Substrate must be at least 5 degrees above dew point, with best processing results when ambient humidity is below $80 \%$. Substrate must also be free of moisture (dew or frost), grease, oil, solvents and other materials that would adversely affect adhesion of the polyurethane foam.

Huntsman Building Solutions Icynene Xpress 55 must be separated from the interior of the building by an approved thermal barrier or an approved finish material equivalent to a thermal barrier in accordance with applicable codes. This product must not be used when the continuous service temperature of the substrate or foam is below $-60^{\circ} \mathrm{F}\left(-51^{\circ} \mathrm{C}\right)$ or above $180^{\circ} \mathrm{F}\left(82^{\circ} \mathrm{C}\right)$. Huntsman Building Solutions Icynene Xpress 55 should not be used in contact with bulk water, below grade or to cover flexible ductwork.
